

CLINICAL STUDY REPORT OF ANTIPSORIASIS OINTMENT - WINSOR

A randomized clinical trial conducted at 'key Clinic', 1st Main Road, Bapujinagar, Mysore road, Bangalore-26, on ANTIPSORIATIC topical application in ointment form called "WINSOR ointment" manufactured by Sagar Pharmaceuticals. Evaluation was jointly done by Dr.Majid & Dr.Anupama.

Observations:

Among 68 patients 3 patients had excellent result, 2 had good result, 32 had moderate, 16 had mild, 11 had aggravated & 4 had no result.

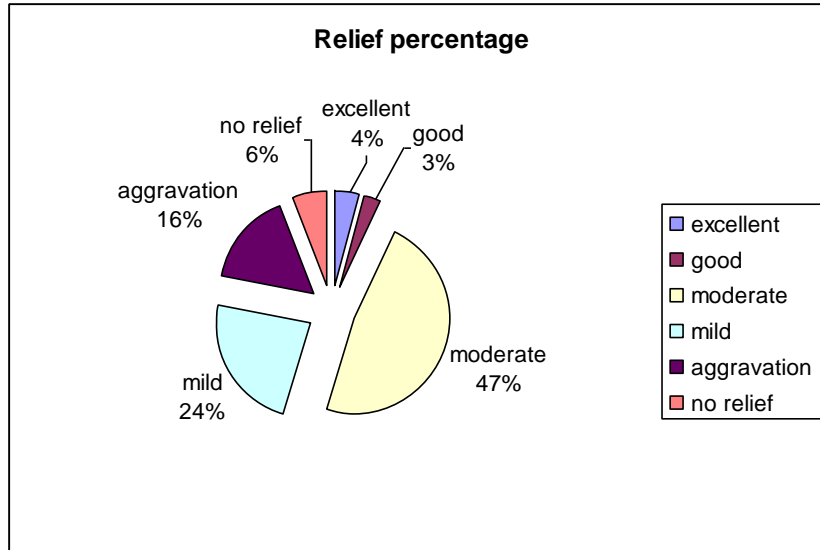

On basis of this data we can present the relief chart as follows

Among the 11 patients with aggravation: few had mild & severe adverse effects.

Among no results & aggravated results, 10 patients had discontinued the study.

Percentage wise relief scale of patients

This makes it 78 % with relief & 22% with negative feedback. Among the 22% about 16% of the cases aggravated on application of the ointment & 6% had no relief on application.

Results:

Overall patient satisfaction was in the range of 10 to 90%.

Conclusion:

From study reports it can be concluded that, Antipsoriatic ointment - WINSOR is effective in patient with

- ❖ Chronic Plaque type of Psoriasis
- ❖ Palmoplantar type of Psoriasis.

This topical medicine can be safely used in children with wide spread plaque psoriasis for longer periods. It is a valuable armamentarium in the hands of dermatologists. It needs further study, long term evaluation especially in other types of psoriasis. It is cost effective and well accepted.

Continued treatment gives increased overall relief rate. The topical medicines can be safely used especially in wide spread plaque psoriasis. It is cost effective and well accepted.
